Wally API - Creating a New Deal

1) /auth/register - new user registration. No token is required.

2) /auth/login endpoint - with an ADMIN token do a login to an existing user account with it's e-mail and password. A user token will be returned.

3) /auth/me endpoint (OPTIONAL) - returns user ID from token.

4) /deal endpoint - with user token do a post with the required params. The API will check the user ID from the user token in case it is not given as a param.

The proper params list can be taken from /doc endpoint.
